**Genotype Analysis**  
**GenomeStudio:** GenomeStudio V2.0.5  
**Genotyping Module:** V2.0.5

**CNV Analysis**  
**Algorithm:** CNV-Partition  
**Version:** 3.2.0

Parameters are set to detect copy number variations (CNVs)  $\geq 45$  kb and loss of heterozygosity (LOH) regions  $> 1$  Mb with a confidence value  $> 35$ . Balanced translocations and inversions cannot be detected with this method. Aberrant copy number regions are identified by log R ratio and B allele frequency. Copy number changes (gains and losses) greater than **0.4 Mb** and regions of LOH above **5 Mb** are considered reportable and taken into account for interpretation. Genomic positions are based on genome build GRCh37/hg19.

\*Number of genes in CNV/LOH regions given only for **reportable** calls (see Appendix for details on genes in reported regions).

**Interpretation**

- There was **1** reportable copy number change identified in the BIHi257-A-2 MB01 MB01line.
  - > A 0,692 Mb Gain region on chromosome 10 was observed. 10 genes were found in this genomic region.
