## Certificate of Analysis (CoA) for induced Pluripotent Stem Cells

This product is for research only

## ECACC Catalogue No: 66540581

| Cell Line Name               | BIONi037-A-1   | Batch / Lot Number                | M001                                 |
|------------------------------|--|-----------------------------------|--------------------------------------|
| Reprogramming Method         | Episomal vector (OCT3/4, SOX2, cMYC, LIN28, SHP53 and KLF4)  |                                   |                                      |
| Genetic Modification         | AAV vector with CRISPR-Cas9  |                                   |                                      |
| Passage Number               | Passage 31   | Cell number / vial                | 1x10 <sup>6</sup>                    |
| Culture Matrix               | Matrigel <sup>™</sup>  | Culture Medium                    | mTeSR <sup>™</sup> -1                |
| O <sub>2</sub> Concentration | 21%  | CO <sub>2</sub> Concentration     | 5%                                   |
| Passaging Method             | EDTA   | Additional Culture<br>Information | Rho kinase inhibitor<br>used at thaw |
| Cryopreservation Medium      | Cryostor®  |                                   |                                      |
| Recommendation for thawing   | Recommended thaw into 1 well of a 6-well plate or per 10cm <sup>2</sup><br>Refer to cell line user protocols for further guidance at www.EBiSC.org |                                   |                                      |
| Additional Comments          | Typical recovery after thaw, typical growth to confluency  |                                   |                                      |

Please see <u>https://cells.ebisc.org/</u> for further information on Quality Control and characterisation applied to lines released by EBiSC. The following standard testing criteria have been determined within EBiSC, prior to release of this product:

| Test               | Assay   | Acceptance Criteria  | Result  |
|--------------------|---|--|---|
| Sterility          | Inoculation for<br>microbiological growth                 | Not Detected   | Pass  |
|                    | Mycoplasma  | Not Detected   | Pass  |
|                    | Virology (HBV, HCV, HIV1,<br>HIV2)                        | Not Detected   | Confirmed Pass by<br>depositor  |
| Cell Line Identity | STR / Fingerprinting                                      | N/A  | Allele data recorded and<br>available upon request.<br>Match to donor |
| Viability          | Visual Assessment   | Growth to confluence<br>post-thaw                                      | Acceptable  |
| Phenotype          | Continuous visual assessment<br>of iPSC colony morphology | Recorded   | Typical PSC colonies with<br>low differentiation levels               |
|                    | Flow Cytometry  | SSEA-4 > 70% +<br>TRA-1-60 > 70% +<br>SSEA-1 < 10% +<br>POU5F1 > 70% + | Pass  |
