

# Certificate of Analysis (CoA) for induced Pluripotent Stem Cells

*This product is for research only*

ECACC Catalogue No: 66540842

|                              |   |                                |                                   |
|------------------------------|---|--------------------------------|-----------------------------------|
| Cell Line Name               | STBCi084-C  | Batch / Lot Number             | M001                              |
| Reprogramming Method         | Sendai CytoTune™ 2.0 (OCT3/4, SOX2, cMYC, and KLF4)   |                                |                                   |
| Passage Number               | Passage 16  | Cell number / vial             | 1x10 <sup>6</sup>                 |
| Culture Matrix               | Matrigel™ / Geltrex™  | Culture Medium                 | mTeSR™-1                          |
| O <sub>2</sub> Concentration | 21%   | CO <sub>2</sub> Concentration  | 5%                                |
| Passaging Method             | EDTA  | Additional Culture Information | Rho kinase inhibitor used at thaw |
| Cryopreservation Medium      | Cryostor®   |                                |                                   |
| Recommendation for thawing   | Recommended thaw into 1x 50mm plate<br>Refer to cell line user protocols for further guidance at <a href="http://www.EBiSC.org">www.EBiSC.org</a> |                                |                                   |
| Additional Comments          | Slow recovery after thaw, slow growth to confluency   |                                |                                   |

Please see <https://cells.ebisc.org/> for further information on Quality Control and characterisation applied to lines released by EBiSC. The following standard testing criteria have been determined within EBiSC, prior to release of this product:

| Test                             | Assay  | Acceptance Criteria  | Result  |
|----------------------------------|--|--|---|
| <b>Sterility</b>                 | Inoculation for microbiological growth                         | Not Detected   | Pass  |
|                                  | Mycoplasma   | Not Detected   | Pass  |
|                                  | Virology (HBV, HCV, HIV1, HIV2)                                | Not Detected   | Pass  |
| <b>Cell Line Identity</b>        | STR / Fingerprinting   | N/A  | Allele data recorded and available upon request. Gender match to donor. |
| <b>Viability</b>                 | Visual Assessment  | Growth to confluence post-thaw   | Low, slow recovery  |
| <b>Phenotype</b>                 | Continuous visual assessment of iPSC colony morphology         | Recorded   | Typical PSC colonies with low differentiation levels                    |
|                                  | Flow Cytometry   | SSEA-4 > 70% +<br>TRA-1-60 > 70% +<br>SSEA-1 < 10% +<br>POU5F1 > 70% + | Pass  |
| <b>Differentiation Potential</b> | Spontaneous EB differentiation and qPCR for trilineage markers | Up-regulation of germ layer markers                                    | Endoderm : Pass<br>Mesoderm : Pass<br>Ectoderm : Pass                   |
| <b>Genomic Stability</b>         | G-Banding  | Sex match to donor. 20 successful karyotypes recorded.                 | No chromosomal abnormalities detected                                   |
