

# ULELi001-A Nanog

Nanog Cell Signaling 4903 rabbit monoclonal IgG

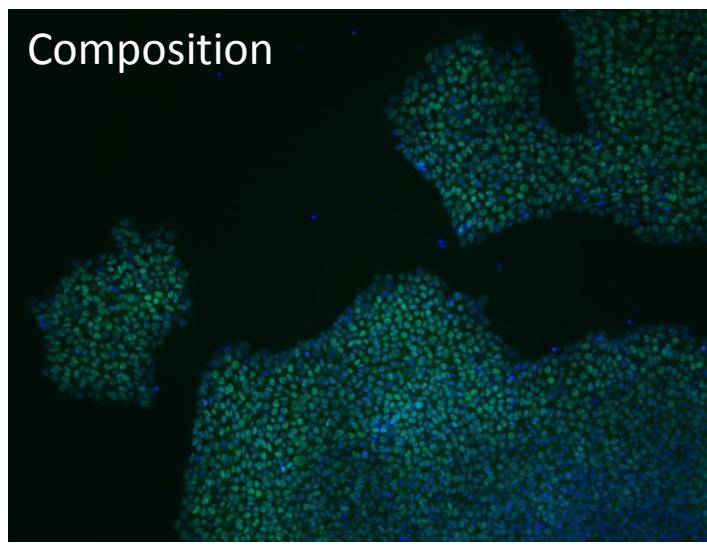

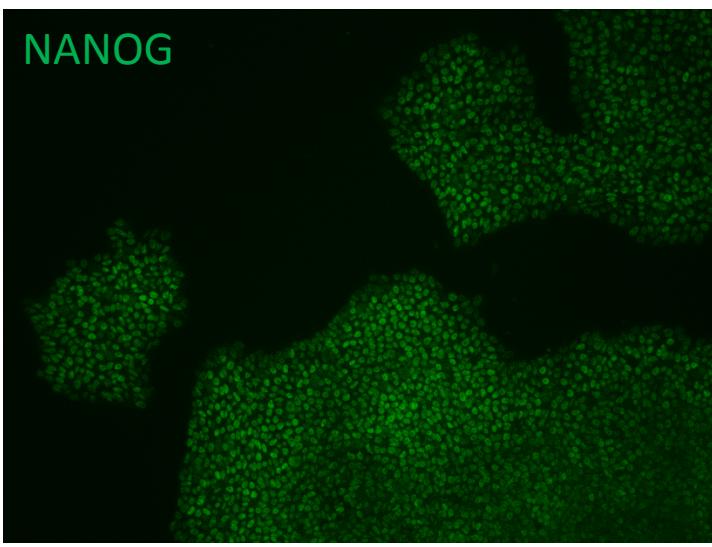

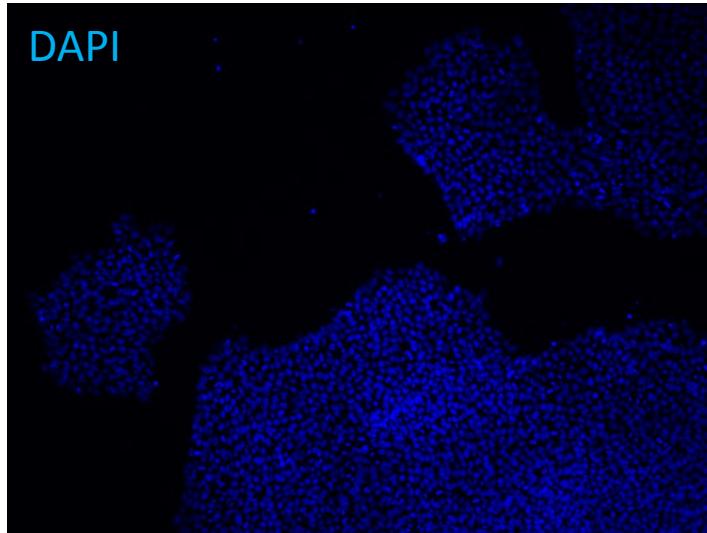

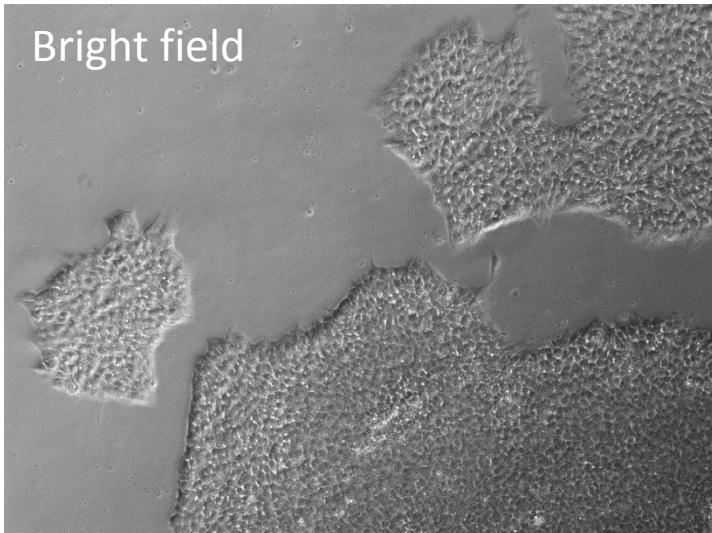

Secondary antibody Thermo Scientific goat anti-rabbit AF 488

# ULELi001-A Nanog

Nanog Cell Signaling 4903 rabbit monoclonal IgG

Secondary antibody Thermo Scientific goat anti-rabbit AF 488

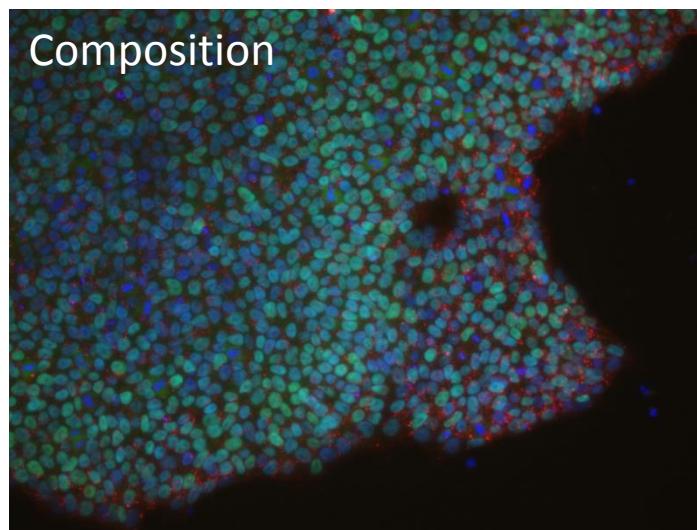

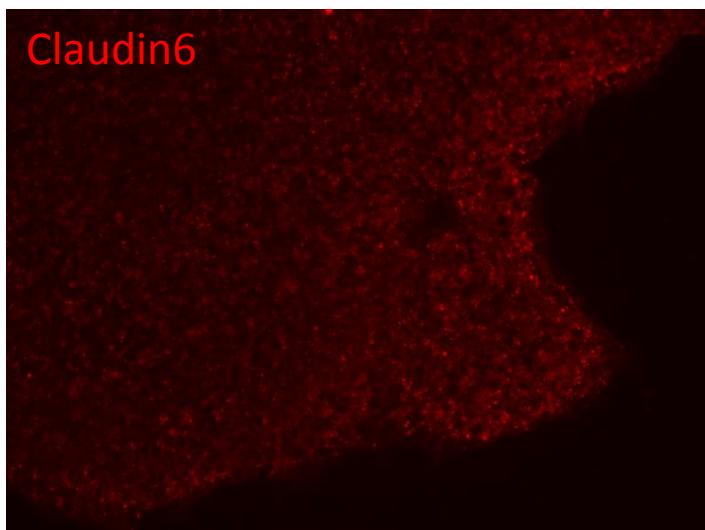

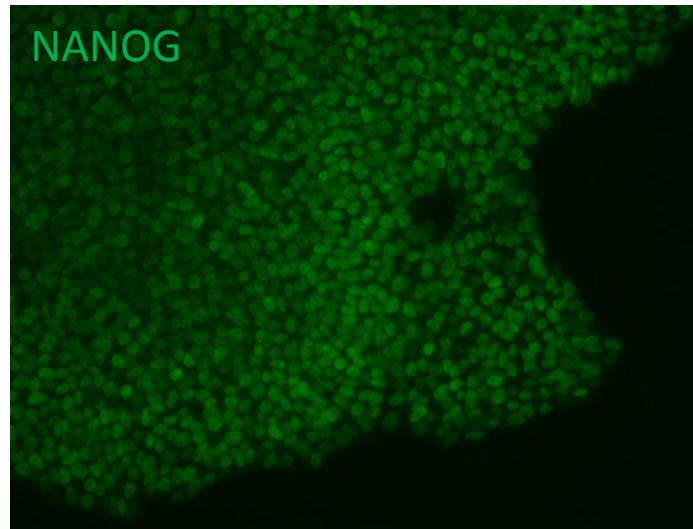

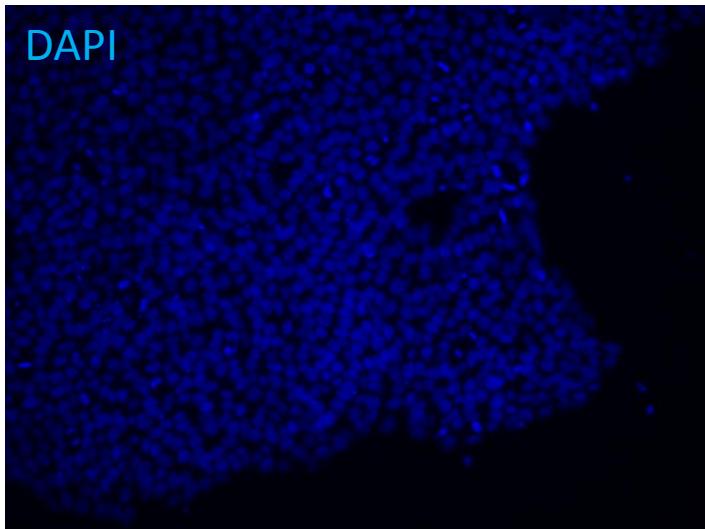

# ULELi001-A Nanog

Nanog Cell Signaling 4903 rabbit monoclonal IgG

Claudin6 R&D Systems MAB3656 mouse monoclonal IGG 2B

Secondary antibody Thermo Scientific goat anti-rabbit AF 488, goat anti-mouse AF 633

# Staining procedure

- Negative control – human skin fibroblasts
- Positive control – commercial iPS cell line Gibco Episomal hiPSC line (**A18945 Life Technologies**)
- Fixation 4% of paraformaldehyde
- Permeabilization 0,01% saponin
- Blocking 0,1% BSA
- Primary antibody incubation overnight (dilution 1:400), secondary antibody incubation 1h (dilution 1:1000)

Immunochemical stains were performed by MS Aniela Skrzypczyk
