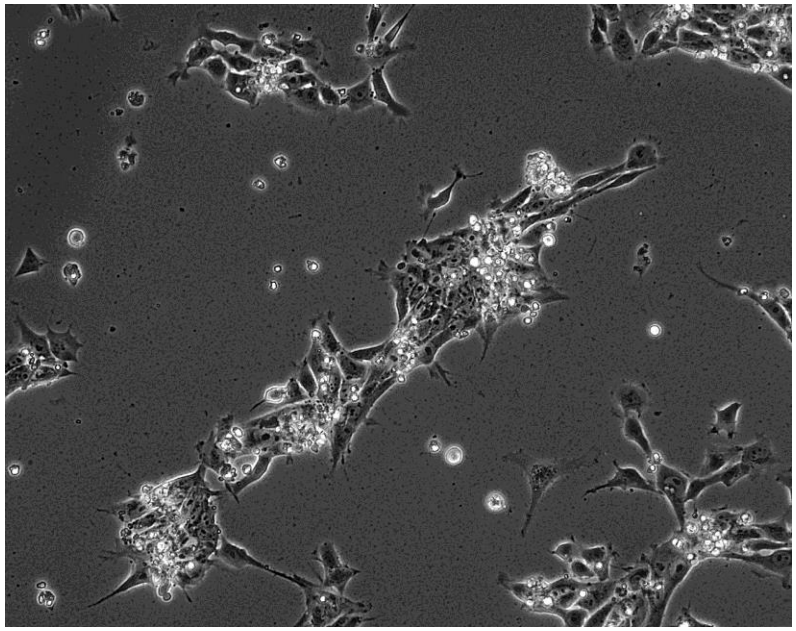
Source of fibroblasts and reprogramming information

- SF049 from University of Oxford
- Reprogrammed at UNEW, on 13-01-2015 at passage 5
- Cytotune 2
- This cell line has been difficult to expand mainly due to differentiation when passaged. Over time, this clone became accustomed to EDTA (versene) passaging and differentiation was diminished. Cells/colonies should be passaged every 4-6 days. Cultures should not be allowed to become confluent as it will lead to differentiation.

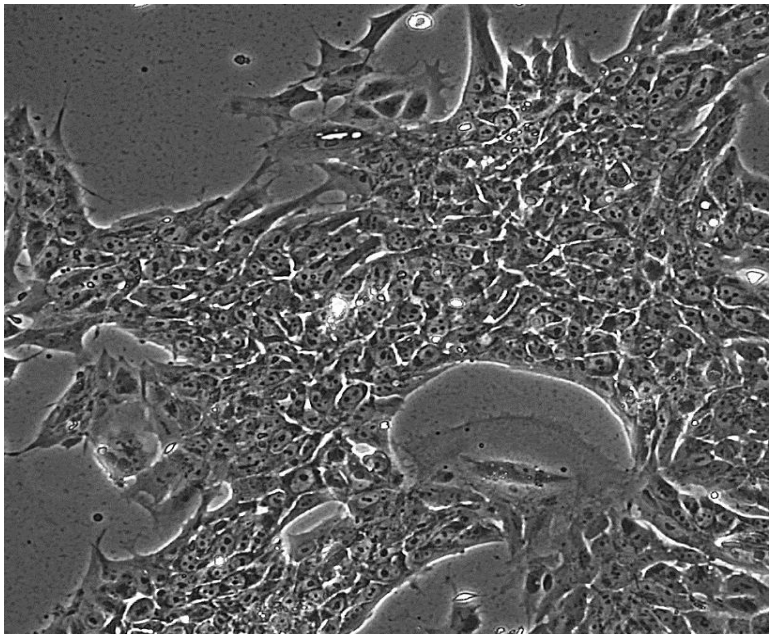
Viability post-thaw and Morphology according to SOP19 passage 20

- Cell count immediately post-thaw: 1.5x 10^6
- Viability immediately post-thaw: 87%
- Photo 24 & 32h post-thaw

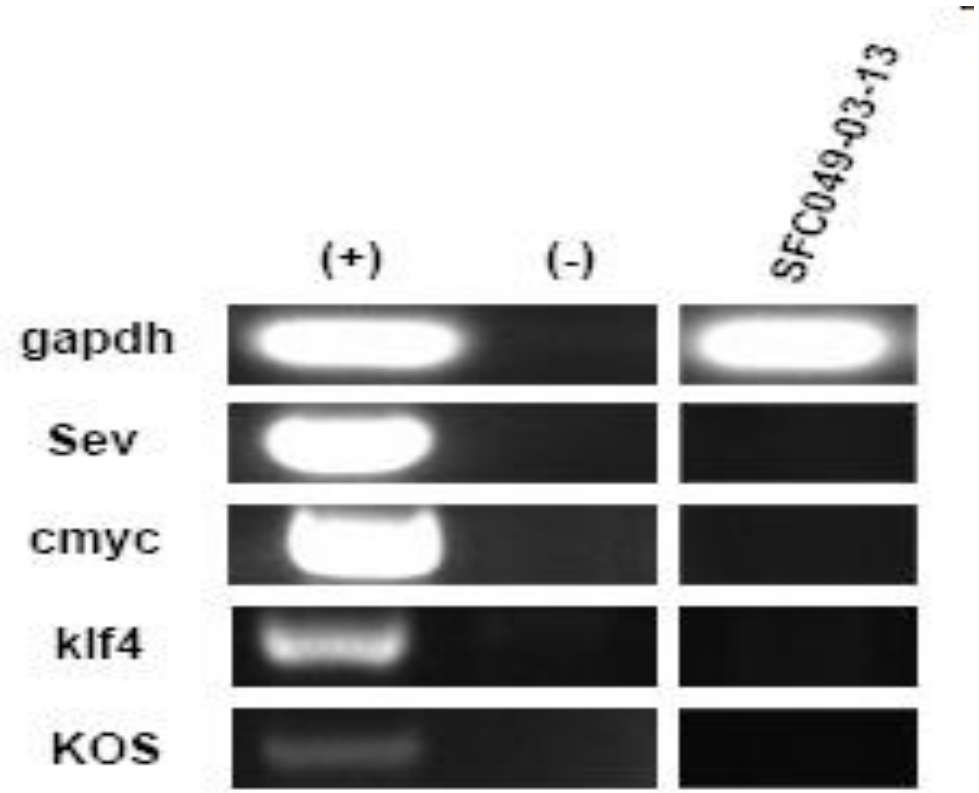
24h (x10)



32h (x10)



Sendai clearance: according to WP3 SOP15 undetectable at passage 20



Mycoplasma test:
According to MycoAlert Lonza LT07-318
Undetectable at passage 20

SNP analysis
according to WP3 SOP Preparation of DNA and RNA samples for Illumina arrays

- Passage 20
- Identity to parent fibroblasts confirmed
- Karyotype abnormalities: none detected
- For details and raw data see StemDB
- Audit 21.07.17
